

## IBM DB2 UDB SERVICE OFFERING FROM OBJECT ARENA

Assessing our service to maximize your business competence

### OBJECT ARENA DB2 UDB SERVICE OFFERINGS

#### Installation & Configuration

Installing Software.  
Maintaining &  
Configuring DB2 Server

#### Performance & High Availability

Applying Upgrade  
service clause for  
performance tuning

Eliminating Disaster  
Recovery. Replicating  
data changes.

#### Migration

Database Migration  
solution with high  
level data integrity

Migration includes  
Data, Schema,  
Procedures, Scripts  
and Triggers.

#### Services

Corporate Training.  
Consultancy  
Campus Training

### Installation & Configuration

Object Arena provides Installation Services' expert resources to install the DB2 9.5 software at your site. Our experts will provide hands-on assistance to address any questions, recap key issues covered in formal training classes, and to ensure your systems and resources are ready to begin applying the knowledge gained in class room to your business needs and operational requirements.

We guide you on the successful IBM installations methods based on proven strategies and procedures. Our dedicated team will exhibit their excellence in execution for your entire upgrade, install, or migrate the base infrastructure of your IBM system to a new, major change by using validated methodologies.

## Performance Tuning

We provide basic configuration and tuning assistance for the databases after DB2 9.5 is installed. We also undertake performance-tuning tasks for the latest IBM release as applicable by the Upgrade Service clause. To overcome poor system performance, our expertise will recommend cost-effective solutions for the overall system performance and bottlenecks in the day-to-day operations.

## High Availability

Our DB2 systems are often mission-critical and any unplanned downtime can have serious consequences. Our experts will apply cost effective methodologies to eliminate disaster recovery management issues.

HADR Replicates data changes to the target database and provides fast fail-over mechanism switching from primary to stand by databases

HADR is versatile and is fully integrated into database into DB2 database system requiring no special hardware or software and using a standard TCP interface to connect the primary and standby database.

## Migration

We provide high-level data integrity while converting to a new migration system, which allows managing and executing your business operations with no impact on the existing operations.

When enterprises migrate from Oracle to DB2, application migration is one of the tedious tasks and there are no good tools which can ease the process of migrating Oracle Stored Procedures to DB2 Stored Procedures.

We can help you migrate the entire databases including data, Database schema, procedures, triggers, and scripts between major database management systems.

### Database Migration Solution Include:

- Stored Procedure Migration
- Data Migration
- SQL Query Migration

Database migration support for industry-leading databases such as Oracle, IBM DB2 UDB, MS SQL Server, and Sybase ASE.

## Enablement/ Education

Education on New Features: Data Server consultants constantly update and review the new features offered in DB2 9.5 with the customer staff, and, if applicable, they will illustrate how the new features implemented in the migrated environment.

Education Services provides the training and knowledge needed to fully utilize your IBM solution.

## Services

“Learning makes Permanent change”

Object Arena objective is to impart training to enable to attain the competitive-edge and to be fully benefited from the global demand.

- Corporate Training
- In-House Training
- Campus Training

Our faculties are experienced and result-oriented IBM Certified professionals.

Object Arena is an authorized IBM Business Partner and distributors of IBM products and we undertake consultancy cum maintenance service.
