

## IBM WEBSHERE SERVICE OFFERING FROM OBJECT ARENA

**Assessing our service to maximize your business competence**

### WebSphere Services

Object Arena provides deployment of Websphere software solution which helps to install and configure software, and to address issues such as system administration, security, scalability and availability.

### Migrate existing software solutions efficiently

Migrating to a new software environment can be essential to achieving organization's business objective.

Our Websphere experts will reduce organization's risk by developing a migration strategy and an implementation plan that minimize disruption and deliver proven results.

### Implementation of Software

Our experts will impart the requisite knowledge transfer to the organization's staff. We also extend our service to evaluate existing in-frastructure assets and map core requirements to customer's business objectives.

We methodically conduct our installation procedures by running the Websphere solution in a test environment, validate the solution architecture, conduct any necessary verification tests and develop applications for the live production environment.

## Pre-request of Software Deployment

Object Arena team will provide the hands-on support and skill-transfer activities to deploy customer's new Websphere software solution.

Object Arena team deployment-readiness engagement can help Customers to :

- Prepare for the deployment of applications in the new production environment.
- Verify the Websphere production environment, including placement of Web servers, application servers and firewalls.
- Verify WebSphere performance and security requirements.

customer's infrastructure's scalability and high-availability functionality.

Our WebSphere experts empower the development team to use WebSphere software so customer's team can build the sophisticated solutions that business requires. And you can begin to reap the benefits of being an on demand business.

## Optimize performance

For Server Monitoring Comprehensive, multi-layered visibility into all vital performance data—using an

intuitive, graphical user interface, administrators can monitor their entire Websphere infrastructure, whether it is comprised of a single application server, or a number of server clusters.

User can set up thresholds and alarms at multiple levels within their infrastructure:

- Resources—collections of WebSphere application servers
- Resource groups—collections of node. Server combinations within each WebSphere application server cluster
- Profiles—custom-defined groupings of individual node. Server combinations within a resource group
- Counters—specific performance metrics for each node. Server combination.

At the counter level, administrators can track a range of specific performance metrics, including memory usage, numbers of database connections and how efficiently they're being used, programs that have started or stopped, and many more.

## Maintaining Software

We provide the skills and expertise you need to help ensure the health of company's application environment.

We will thoroughly review and maintain business-critical systems, and implement best practices that apply to organization's architecture.

## WebSphere Features

To make this a reality, Object Arena experts have captured their skills and experiences to develop work-shops that outline best practices designed to help you make the most of the WebSphere software solution.

The salient features of workshop:

- Helps to maintain WebSphere software solution by assessing customer's application environment
- Offers deep technical skills to deliver a comprehensive review of customer's solution architecture and deployment
- Provides best practices guidance to help ensure Web Sphere Software solution continues to run smoothly.

## Services

“Learning makes Permanent change”

Object Arena objective is to impart training to enable to attain the competitive-edge and to be fully benefited from the global demand.

- Corporate Training
- In-House Training
- Campus Training

Our faculties are experienced and result-oriented IBM Certified professionals.

Object Arena is an authorized IBM Business Partner and distributors of IBM products and we undertake consultancy cum maintenance ser-vice
