

ORACLE TO IBM DB2 UDB MIGRATION SERVICE OFFERING

OBJECT ARENA

Automated Database Migration to DB2 for Linux, UNIX, and Windows

Database migration by conventional methods is resource intensive, which requires deploying large teams and spending long hours in manual, tedious migrations with unpredictable migration results. Our Migration Service allows us to manage, execute and migration process to ensure little or no impact on your business operations while maintaining the highest level of data integrity. We can provide you migrate the entire databases including data, database schema, procedures, triggers, and scripts between Oracle to DB2 System.

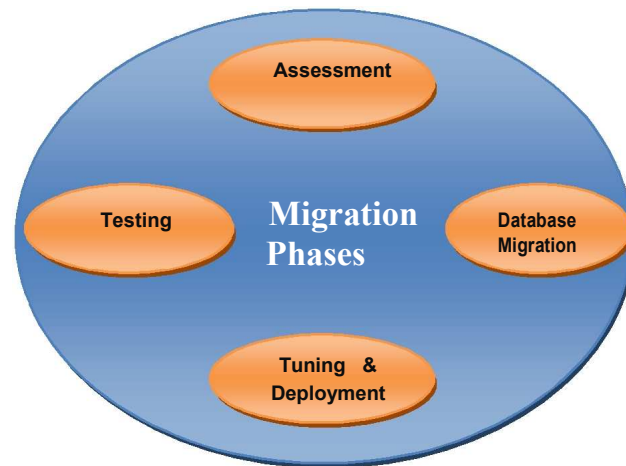

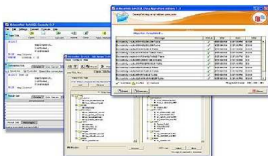

Object Arena offers a industry-leading migration solution which enables migration of complex proprietary stored procedures, database schema, SQL dialects, and enterprise data from one database to another. It automates up to 90% of the manual tasks of database migration.

Benefits

- DB2 Database migrations up to 90%, saves up to 80% of time and cost.
- It ensures data integrity, enhanced productivity eliminating unpredictable issues

Features

- Migration of stored procedures, functions, triggers, database schema, and data from Oracle to DB2.
- Support for conversion of advanced SQL features such as cursors, ref cursors, theta joins, ANSI outer joins and sub queries etc

Database Migration Solutions

IBM Migration Toolkit database migration solutions include Tables Migration, Triggers Migration, Views Migration, Stored Procedure Migration, Data types Migration and SQL Query Migration.
